NWB Duplex

NWB Simplex

Principle Of Operation:

The NWB Series net weigh filler has a specially designed product flow gate powered by gravity. Product flows by gravity from the supply hopper bin into the product feed inlet at the top of the machine. The machines automatically loads product into an internal weigh hopper without operator input or assistance. When a fill cycle is initiated, the product discharges from the weigh hopper through a funnel spout and into the bag and the machine automatically weighs another charge of material into the internal weigh hopper in preparation for the next bag fill cycle. The NWB Series is an automatic net weigh filler that pre-weighs material before discharging it into a bag or other container.
